

Port Moller Test Fish Catch Update

Catch Update #27, July 6, 2025

1—PMTF Catch Update Table

2—PMTF Raw Data

3—District C+E over the Season for 2011-2025

Good evening,

The Daily Catch Index increased again today with catches more evenly distributed across the transect. ...almost like tea leaves. At face value, this suggests the migration rate past the test fishery may be picking up once more. However, catch indices during the second half of the run often do not mean the same as those from the first half. This issue is something we have been and will continue researching. For now, strong indices at Port Moller from this point forward certainly doesn't mean an earlier or smaller run.

PMTF Stock Composition Status: The 10th stock composition (July 5-6) should be released tomorrow (July 7). Note: we mistakenly said July 4-5 in the stock composition update earlier today.
