

Port Moller Test Fish Stock Composition

Stock Comp. Estimate #10, July 5-6, 2025

1—PMTF Inseason Genetics Report

2—PMTF Daily Index Partitioned by District

Hello Everyone,

Attached is the 10th stock composition estimate from ADF&G and the BBSRI At-Sea Genetics Program for the 2025 Port Moller Test Fishery. We've also partitioned the Daily Catch Index by district (see Link 2 above).

While the Nushagak stock's representation in the July 2-3 stock composition may have been puzzling, the latest results help ease uncertainty by showing consistent proportions across other stocks between the two sampling periods. For July 5-6, the Nushagak stock rose to 9%, primarily due to a decline in relative representation from the Wood and Igushik stocks causing the overall district's proportion to remain the same. Ugashik held steady at 15%, which is encouraging.

PMTF Stock Composition (Stations 2-24 from July 5-6):
