

Port Moller Test Fish Catch Update

Catch Update #9, June 18, 2025

[PMTF Catch Update Table](#)

[PMTF Raw Data](#)

[Weight-length Relationship](#)

Good evening,

Today's catch pattern across the transect was similar to yesterday with no increase in overall magnitude.

We anticipate covering the entire transect tomorrow, though weather conditions on Friday currently look sketchy.

With enough fish weights now collected, we can begin assessing overall fish size for this season (see the link above for the weight-length relationship). To date, sockeye caught at Port Moller have averaged 5.2 lbs.

PMTF Stock Composition Status: The two vessels have transferred samples from the last two days. A stock composition for June 17-18 should be released tomorrow.
