

Port Moller Test Fish Catch Update

Catch Update #2, June 11, 2025

Good Evening Everyone,

Catches were light across the majority of the transect today. However, it seems that a band of fish is setting up at stations 8-10 as we had the second day in a row of good catch indices there. As of now catches are pretty evenly split between the 4-1/2" and 5-1/8" nets but it is still too early to draw any interpretations from this.

We should get another day of full coverage of the transect tomorrow.

We will include the typical catch update table and raw data in the next day or so.

PMTF Stock Composition Status: No change in status.

Index by Station

S2: Not Fished- Marine Mammals in the area

S4: 0

S6: 3

S8: 166
