

# Port Moller Test Fish Catch Update

## Catch Update #3, June 12, 2025

Good Evening Everyone,

The band of fish observed at Station 8 over the past two days seems to be spreading to adjacent stations.

Once again we skipped Station 2 due to Pacific White Sided Dolphins being in the area. When marine mammals are present around a station the boats will often try to move away and fish another area close by the station. However, at times they are too prevalent and cause us to skip the station for the day. Similar to last year, this has been occurring for the first three days at Station 2 in 2025.

The wind forecast for tomorrow is not looking good, but currently we think that it will be fishable and will try to get in as many stations as we can.

We will include the typical catch update table and raw data in the next day or so.

**PMTF Stock Composition Status:** No change in status.

### Index by Station

S2: Not Fished- Pacific White Sided Dolphins in the area.
